

how to remove stock?

I understand your question is: "How can I remove (set to zero) the stock of a product in Mirakl?" Is that correct? If you meant something different, please clarify!

Here's how you can remove or set the stock to zero for your products in Mirakl:

How to Remove Stock in Mirakl

1. Manually via the Back Office

1. **Go to the sidebar menu** and select **Catalog** or **Offers** (depending on your marketplace setup).
2. Find the offer/product you want to update.
3. Edit the offer and set the **stock quantity** to **0**.
4. Save your changes.

This will make the offer inactive (not available for sale), as Mirakl automatically deactivates offers with zero stock.

2. Bulk Update via Import File

If you have many products, you can use a bulk import:

1. Prepare an import file (CSV, XLSX, etc.) with your offers and set the stock quantity column to **0** for the products you want to remove from sale.
 2. Go to the **Import** section in your Mirakl back office.
 3. Upload your file and process the import.
-

3. Via API

You can update stock in bulk using the Mirakl API (if you have access):

- Use the [Offers API](#) to update the stock quantity for your offers.
- Set the `quantity` field to `0` for the relevant offers.

4. What Happens When Stock is Zero?

- The offer becomes **inactive** and is not available for customers to purchase.
- You can check the status in your offer list or offer details page.

For more details on offer status and the impact of stock changes, see the [Offer Status documentation](#).

Additional Notes

- If you **reject an order**, Mirakl will automatically set the offer stock to zero for the rejected order line.
- **Refunding an order** does NOT automatically update the stock—you must do this manually if needed.

If you want to remove stock for a specific scenario (such as only for certain channels, or using a connector), please provide more details so I can give you the most accurate instructions!
